PROFESSIONAL SUMMARY

Systems and DevOps Engineer with 3+ years of experience supporting Linux servers and production applications in an enterprise environment. At Tata Consultancy Services, I supported IKEA's infrastructure, working mainly with RHEL/Linux, Ansible, Oracle WebLogic, Apache Tomcat, ServiceNow, and Bash/Python scripting. Much of my work involved production support, incident troubleshooting, middleware support, server automation, patching, and SSL certificate management across 400+ servers. I enjoy finding repetitive tasks that can be automated and making day-to-day operations more reliable.

TECHNICAL SKILLS

Operating Systems & Infrastructure: Linux (RHEL, CentOS, Ubuntu), Windows Server (basic), VMware, Oracle WebLogic, Apache Tomcat, System Patching and Hardening

Automation and Scripting: Ansible, Bash, Python, PowerShell (basic), Configuration Management, CI/CD

DevOps and Cloud: Jenkins, Docker, Kubernetes (CKA in progress), Git/GitHub, Google Cloud Platform, AWS EC2/S3 (familiar), Terraform (in progress)

Monitoring and Incident Management: System Monitoring, Log Analysis, Root Cause Analysis, ITIL, ServiceNow, Jira, SLA Management, 24/7 Production Support

Collaboration: Runbooks, Technical Documentation, Confluence, Agile (Scrum/Kanban), Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

System Engineer and DevOps Engineer, Tata Consultancy Services (Client: IKEA) | June 2021 to August 2024

- Supported more than 400 Linux servers across IKEA's production and non-production environments.
- Provided day-to-day administration and production support for RHEL/Linux systems, including troubleshooting, incident handling, patching, and routine maintenance.
- Supported Oracle WebLogic and Apache Tomcat environments and worked on application and middleware-related production issues.
- Investigated production incidents, performed root cause analysis, and worked with application and middleware teams to restore services.
- Automated SSL certificate renewal and deployment across 400+ servers using Ansible and Bash, reducing manual work and deployment errors.
- Created Python and Bash scripts to automate repetitive system administration tasks and reduce manual effort.
- Worked with ServiceNow and Jira for incidents, changes, service requests, and production support activities while meeting SLA requirements.
- Provided 24/7 production and on-call support for business-critical applications and handled high-priority incidents.
- Worked with monitoring and alerting processes for server and application health and helped identify issues before they affected production.
- Received Star Performer of the Month twice and was recognized on the TCS Wall of Fame for contributions to automation and operational reliability.

PROJECTS

Self-Healing Incident Automation (Ansible and ServiceNow)

Tata Consultancy Services, Client: IKEA

- Built an automation workflow that monitored the ServiceNow incident queue for P1 incidents and identified the affected server.
- The workflow performed recovery steps such as collecting logs, restarting services, and restarting processes without requiring manual intervention.
- When an incident could not be resolved automatically, the workflow escalated it to the middleware support team with the relevant incident details and logs.
- The automation helped reduce the amount of manual work required during after-hours support.

SSL/TLS Certificate Expiry Monitoring (Ansible and Oracle Wallet)

Tata Consultancy Services, Client: IKEA

- Created an Ansible workflow to check 400+ servers for Oracle Wallet files and identify certificates approaching expiration.
- Configured the process to flag certificates with 30 days or less remaining.
- Added automated notifications and ServiceNow work log updates so the support team could track certificate status.
- Replaced a manual server-by-server certificate audit process with an automated workflow.

WebLogic Patch Automation (Ansible, JFrog, and ServiceNow)

Tata Consultancy Services, Client: IKEA

- Developed an Ansible-based workflow for WebLogic patch deployments that was triggered through ServiceNow.

- The workflow included pre-checks, OEM blackout handling, patch download, deployment sequencing, and post-patch validation.
- Added rollback steps to handle conflicts during deployment.
- The automation helped standardize WebLogic patching across more than 20 application deployments.

Server OEM Blackout Management (Ansible and ServiceNow)

Tata Consultancy Services, Client: IKEA

- Developed an Ansible workflow to identify and remove stale or unauthorized OEM monitoring blackouts.
- Integrated the workflow with ServiceNow to make blackout management more consistent across the server environment.
- Helped address situations where stale blackouts could prevent monitoring alerts from reaching the support team.

Middleware Configuration and Build Deployment Automation (Ansible Tower and ServiceNow)

Tata Consultancy Services, Client: IKEA

- Built a parameterized deployment workflow in Ansible Tower for middleware configuration and build deployments.
- Added pre-deployment backups, OEM blackout handling, and post-deployment validation.
- Integrated the workflow with ServiceNow so deployments could be initiated and tracked through the existing ITSM process.
- The automation reduced configuration deployment errors across multiple environments.

Full Stack Serverless Web Application (Vercel, Notion API, Resend)

Personal Project

- Built and deployed a web application on Vercel using serverless API functions.
- Used a Notion database as the content source so menu information could be updated without changing the application code.
- Added automated email notifications through Resend for order confirmations.
- Resolved a Node.js runtime compatibility issue by moving the API functions to CommonJS and explicitly configuring the Node 20 runtime.

CERTIFICATIONS

- Red Hat Certified Specialist in Ansible Automation, October 2023
- Google Cloud Certified Associate Cloud Engineer, May 2023
- Terraform Associate, HashiCorp, In Progress
- Kubernetes CKA, Planned

EDUCATION

Bachelor of Engineering, Velammal Institute of Technology | *Aug 2017 to Apr 2021*

CGPA: 8.0
